

Vision™ Twin Tank Systems

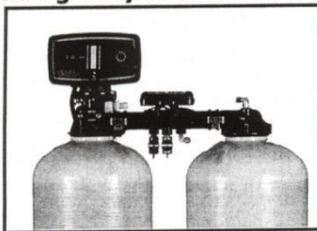

Vision™ Twin Tank Systems use the Vision™ Manifold to combine water softeners, filters, and in/out heads. Filter media can be selected to suit many applications. These systems can also add the Vision™ **Airregen™** System mounted on the Vision™ Manifold (see bottom right). The use of the Vision™ Manifold makes for easy plumbing and can be used to retrofit existing treatment systems with no new plumbing needed.

The Vision™ Manifold can be used to create your own custom Twin Tank systems. Simply choose any two single tank systems, a Vision™ Manifold, and your choice of bypass.

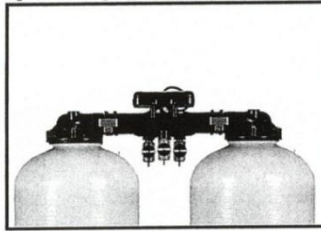

The Vision™ Manifold can be used to retrofit any existing 5600 or 5600SXT valve to create a twin tank system without any additional plumbing. Make a system combining a softener, filters, and/or in/out heads. Add a filter, add a softener, or add an in/out head to an existing filter or softener, no new plumbing needed.

The Vision™ Manifold is a cost-effective way to convert or install water treatment for multiple water problems. See our specialty catalog for more information.

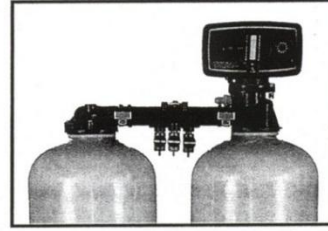

Packaged Systems From our Specialty Catalog:

Packaged IronVision™ (See Page 6)

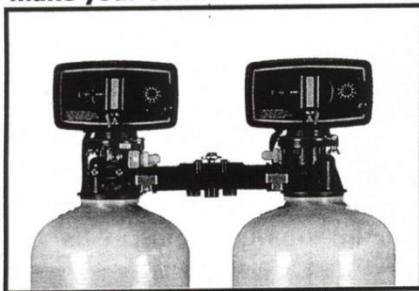

Packaged Vision™ Monitor

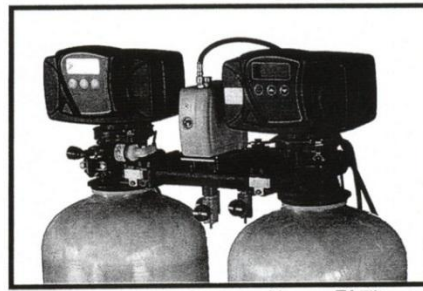

Packaged Vision™ NutriFilter™ with twin tank accessories: 3- Sample Valves

Or make your own:

5V45-2 Softener 15VA Acid Neutralizer

With Twin Tank Accessories:
1- Vision™ Manifold
1- 1" Stainless Steel Bypass Valve

Electronic Metered Softener 5VX45-2M **Airregen™** Filter AR15VX-MTM

With Twin Tank Accessories:
1- Vision™ Manifold
3- Sample Valves
1- 1" Stainless Steel Bypass Valve
